The University of South Carolina System provides equal opportunity and affirmative action in education and employment for all qualified persons regardless of race, color, religion, sex, national origin, age disability or veteran status. The University of South Carolina System has designated as the ADA and Section 504 coordinator the Executive Assistant to the President for Equal Opportunity Programs.
CONTENTS

I. Introduction 2
   • Dr. Bruce E. Rippeteau, Director and State Archaeologist

II. Division Synopsis 4
   • Administration
   • Office of the State Archaeologist
   • Research
   • Savannah River Archaeological Research Program
   • Underwater Archaeology

III. Research 6
   • Santa Elena Research Project
   • The Groton Plantation
   • The Yamasee Archaeological Project
   • "Children of the Sun" Video Project
   • Publication of Book on Prehistoric Southeastern Indians
   • Paleoindian Research
   • The SCIAA Research Library
   • Waccamaw Center for Historical and Cultural Studies

IV. Office of the State Archaeologist 12
   • Conservation
   • Curation
   • Information Management Division

V. Savannah River Archaeological Research Program 16

VI. Underwater Archaeology 18
   • Sport Diver Archaeology Management Program
   • Compliance
   • Research
   • General SCIAA Support

VII. Archaeological Research Trust (ART) 22

VIII. Archaeological Society of South Carolina 24

IX. Staff 26

X. Appendices 28
   A. Publications
   B. Editorships
   C. Papers Presented at Scholarly Meetings
   D. Courses Taught
   E. Theses and Dissertations
   F. SCIAA Research Affiliates
   G. Institute, University and State Committees and Boards
   H. Consultations
   I. Public Education
   J. Other Professional Committees and Offices
   K. Awards
   L. Grants and Contracts

XI. Coda 50
1991 was a real fine, fine year for the South Carolina Institute of Archaeology and Anthropology (SCIAA) even though, truthfully, the times were extremely tough.

However, in this lean time of staff cutbacks, SCIAA achieved much. We brought to fruition our new Archaeological Research Trust on 14 November, a project initiated in 1984 and put on the front burner in 1989. We completed our Internal Operations Policy book, a two year effort that for the first time in 28 years codified our procedures beyond those of the State and University.

We also experienced actual expansions. In the Savannah River Archaeological Research Program, a new, 5 year United States Department of Energy/University of South Carolina-SCIAA Cooperative Agreement was negotiated. The Underwater Archaeology Program, with great legislative effort, rewrote and had signed into law an updated version of our Underwater Management Act as well as pumping up the Hobby Sport Diver Program.

We substantially improved our Headquarters at 1321 Pendleton with the creation and installation of an Education Room/General Meeting Hall, new and very professional Lobby Exhibits, and a redone Front Office. All of this was achieved with the great help of USC Facilities and especially with the volunteer, actual hands-on skills of several SCIAA staff members.

We provided SCIAA leadership and assistance throughout the Great State of South Carolina not only to our archaeological colleagues in University, Government, and Business, but also to numerous citizen callers, landowners, teachers, civic groups, and an endless array of taxpaying users. For example, we:

- taught courses at all levels of Schools and Higher Education
- gave numerous public lectures to civic groups statewide
- employed undergraduate students, graduate students, and graduates of USC and several other universities
- assisted the Council of South Carolina Professional Archaeologists in numerous ways and with them were lead for a fabulous "Synthesis" Project of
South Carolina cultural history

- worked hand-in-hand with the Archaeological Society of South Carolina to put on the smash Fourth Annual Archaeology Field Day at the new venue of Santee State Park
- worked closely and cooperatively with the South Carolina Department of Archives and History, the State Museum, and the State Parks
- especially worked with the South Carolina Heritage Trust, located in the South Carolina Department of Wildlife and Marine Resources. (The SCIAA Director served, in 1991, as the first agency head elected to chair the Trust, and in that period the Trust Board purchased or received by donation nearly $4 million dollars of natural and cultural state Heritage Properties.)
- assisted daily the needs of the South Carolina archaeology community, especially the State and Federal agencies and the Cultural Resource Management Business Contractors and Consultants
- did our complimented, third Institutional Self-Study with USC, and separately received an also highly complimentary Review by The South Carolina Commission on Higher Education
- did a third, swell Teachers’ Summer Institute with the South Carolina Department of Education
- had former (retired in 1984) Director Robert L. Stephenson receive the prestigious, career Seiberling Award from the Society for Professional Archaeologists
- finished a massive bibliography of South Carolina Archaeology which was selected as "one of the top ten documents produced" by a State Agency and received a Notable Document Award
- curated thousands of artifacts and site reports, while maintaining our station-keeping duties at the fore and doing research and publications of national note and importance.

Broadly painted, in 1991 we had 31 Full Time Employees and 33 Temporaries. This running total was up from previous years due to the tax-base personnel cuts being more than compensated for by grants and contracts. Overall, we are a growing, $1.3 million operation, with about $810,000 being from State allocated funds through the USC (and of these approximately 40% are explicitly for University research and 60% are for State agency services), and roughly $530,000 in grants, contracts, and private donations.

This Annual Report highlights SCIAA programs and activities from January 1991 through December 1991. A list of activities is stated by Division on the following pages.

I am very proud of SCIAA’s growth and maturity at USC and in South Carolina. I am also very proud of the high level of productivity that the people of SCIAA accomplish every day for USC, the State, and the People, and I hope you will agree.

— Bruce E. Rippeteau
SCIAA Director, State Archaeologist, and Research Professor
ADMINISTRATIVE DIVISION
* oversees and leads other Divisions
* interacts with other USC departments and State Agencies
* manages all fiscal, budgetary and personnel matters
* conducts the Statewide Archaeological Site Inventory
* advises other state agencies
* maintains all of SCIAA's facilities
* administers a speaker's bureau for presentations to schools and civic organizations
* supports the South Carolina Collector's Survey to inventory private collections
* sponsors the Archaeological Society of South Carolina

OFFICE OF THE STATE ARCHAEOLOGIST DIVISION
* advises state agencies on archaeological matters
* houses the Archaeological Collections of South Carolina
* maintains the SC Archaeological Site Inventory

* manages archaeological cartographic, photographic and manuscript files
* operates archaeological laboratories for processing and analyzing artifacts
* serves as a major artifact conservation facility
* provides guidance to museums on exhibits and collections
* publishes popular and professional monograph series
* supports the South Carolina Collector's Survey to inventory private collections
* responds to inquiries for archaeological information by professional researchers
* offers public education programs on prehistorical and historical archaeology
* provides research guidance to students at USC and other major universities
* maintains strong ties to the avocational community through a variety of programs
* provides graduate school assistantships and internships

RESEARCH DIVISION
* conducts research supported by grants
* carries on interdisciplinary studies of all periods of human occupation in the Southeast
* develops models of complex early Native American political organizations
* maintains an archaeological research library
* provides graduate student research assistantships
* offers public education programs on prehistorical and historical archaeology
* provides research guidance to students at USC and other major universities
* maintains strong ties to the
avocational community through the programs of the Archaeological Society of South Carolina

SAVANNAH RIVER ARCHAEOLOGICAL RESEARCH PROGRAM

* advises DOE on archaeological matters within the boundaries of the SRS
* carries on interdisciplinary studies of all periods of human occupation
* develops models of complex early Native American political organizations
* provides graduate student research assistantships
* offers public education programs on prehistorical and historical archaeology
* provides research guidance to students at USC and other major universities
* maintains strong ties to the avocational community through the programs of the Archaeological Society of South Carolina

UNDERWATER ARCHAEOLOGY DIVISION

* conducts archaeological research on inundated sites throughout South Carolina
* carries on interdisciplinary studies of the South Carolina's maritime adaptation
* studies the evolution of watercraft design and construction
* administers the South Carolina Underwater Antiquities Act of 1990
* administers the Sport Diver Archaeology Management Program
* reviews all forms of development for impacts on our underwater heritage
* advises state agencies on underwater archaeological matters
* provides graduate school assistantships and internships
* provides public education programs on all aspects of underwater archaeology
* provides research guidance to students at USC and other major universities

SANTA ELENA RESEARCH PROJECT

In April and May of 1991, Stanley South and Chester DePratter co-directed excavations at the 16th century Spanish colonial site of Santa Elena on Parris Island. This project, the first since 1985, was a public visitation and learning by witnessing an excavation in progress. The project was funded in part by the Columbian Quincentennial Commission of South Carolina, SCIAA’s Robert L. Stephenson Research Fund, and SCIAA’s Anonymous Benefactor Account. The United States Marine Corps provided major cooperative assistance toward making the project a success. The project utilized volunteers from several states as the excavation crew. Christopher Judge was hired to provide guided tours to over 1,200 visitors who came to view the excavations. Other SCIAA staff who worked on the excavation crew were Tommy Charles and Nena Powell.

The project resulted in the excavation of an area 50 by 90 feet located in the area of the 1566-1587 settlement of Santa Elena. One house ruin was discovered, which makes a total of six houses located at the site thus far. Analysis of the artifacts recovered in this project was carried out with the assistance of Carl Steen, Laura Green, and USC graduate student Dean Foster. The results of this expedition and all previous projects at Santa Elena have been summarized in a book available to the public through SCIAA’s Popular Series 2, entitled Archaeology at Santa Elena: Doorway to the Past by Stanley South. In addition, South Carolina Educational Television has produced a 10 minute video on the Santa Elena project for promotional and educational purposes. The joint SCIAA-Columbian Quincentennial Commission project is planned to continue at Santa Elena in 1992.

THE GROTON PLANTATION PROJECT

In January 1991, Chester DePratter returned to Groton Plantation, Allendale and Hampton Counties, South Carolina, to continue research initiated in 1990. Research focused on Ware Creek Ridge (38HA148), a 5 m high, 300 m long sand ridge located in the floodplain of the Savannah River. This ridge was the site of a major Savannah/Irene period occupation dating to approximately A.D. 1200-1450. Collectors began systematically looting urn burials and cremations along this ridge in
the mid-1960's (based on information obtained from informants). The main purpose of the 1991 project was to map the destruction to the site and to evaluate its remaining research potential.

During a seven-week period in January and February, 1991, Chester DePratter, Tommy Charles, Nena Powell, and volunteer Barbara Hiott plotted more than 620 "potholes" excavated by collectors in the past 30 years. Mapping was facilitated by a base map created by Bob Parler of Edisto Surveyors, Inc., Orangeburg, South Carolina. In addition to mapping, collections were made from the backdirt piles adjacent to the plotted potholes, thus allowing mapping of the distribution of the various occupational components on the ridge. Backdirt piles containing human remains were screened and one nearly complete skeleton and at least eight cremations were recovered. Based on the information recovered during the 1991 season, plans were made to initiate subsurface testing on the site in 1992.

In addition to mapping 38HA148, DePratter and the crew continued the survey of upland portions of Groton Plantation on rain days and days when access to Ware Creek Ridge was blocked by flood waters. During five days of surface survey, seventy collections representing nearly sixty sites were made. The total number of known sites on Groton Plantation, now over 110, is only about three percent of the total land area that has been surveyed.

THE YAMASEE ARCHAEOLOGICAL PROJECT

In July and August, Chester DePratter initiated a field project to test several village sites suspected to have been occupied by the Yamasee Indians between A.D. 1684 and 1715. This research was funded by a Federal Survey and Planning Grant administered by the South Carolina Department of Archives and History. With a crew composed of David McKivergan, Ashley Chapman, and volunteer Barbara Hiott, DePratter visited and tested six sites with potential for Yamasee occupation. Sites were selected based on previous archival research conducted by DePratter and USC graduate students, William Green and David McKivergan.

Subsurface testing and mapping indicated that at least four Yamasee towns were identified during the 1991 season. Analysis of recovered collections was completed in the fall of 1991 and the final report will be completed in 1992.

"CHILDREN OF THE SUN" VIDEO PROJECT

Working in conjunction with WNSC-TV, South Carolina Educational Television, Rock Hill, Chester DePratter produced a one-hour video on the Indian societies encountered by the Hernando De Soto expedition. DePratter wrote the script and was the producer and on-camera talent for this ambitious project that retraced the route taken by Hernando De Soto and his men in 1539-1543. Beginning in Tampa Bay, Florida, DePratter and the TV crew, directed by Larry Hall, traveled to central Arkansas to video footage on location. The finished project, titled "Children of the Sun," premiered on South Carolina Educational Television stations in October and was broadcast on many public television stations across the Southeast in the following months. After its initial airing in the Southeast, the program was made available to public television stations nationally and it will continue to air across the country into 1992.
PUBLICATION OF BOOK ON PREHISTORIC SOUTHEASTERN INDIANS

In 1991, Chester DePratter's book *Late Prehistoric and Early Historic Chiefdoms in the Southeastern United States* was published by Garland Publishing, Inc. The book is a contribution in Garland's Outstanding Dissertation series, edited by David H. Thomas. This is a study of the political organization of southeastern Indian societies as they were described by the earliest European explorers and settlers. Applications and comparisons are made with late prehistoric Indian groups across the Southeast from an archaeological perspective.

PALEOINDIAN RESEARCH

During 1991, Albert Goodyear participated in four conference gatherings to present new data and serve as a discussant concerning current issues in Paleoindian research in the Southeast.

In May of 1991 he was asked by Dr. S. David Webb of the Florida Museum of Natural History and his colleague James Dunbar to serve as a member of the Aucilla Advisory Council, a multidisciplinary panel of scholars formed to provide council to the Aucilla River Project. The project is centered on a submerged Paleoindian site located within a sinkhole in the Aucilla River, Florida, where artifacts appear to be associated with extinct Pleistocene megafauna. Also in May, Goodyear presented a paper at the spring meeting of the Society for Georgia Archaeology at Augusta College on Early Man in the Savannah River Valley.

In September, he presented a paper on the role of depositional processes in the study of early Holocene archaeological sites in South Carolina at a symposium organized by the Council of South Carolina Professional Archaeologists. In November, Goodyear and his colleague, Dr. Dan F. Morse of the Arkansas Archeological Survey, jointly chaired a symposium at the Southeastern Archaeological conference in Jackson, Mississippi entitled "The Pleistocene-Holocene Transition in the Southeast." The symposium lasted the entire day and included papers drawn from Illinois to Florida treating the archaeology, paleontology, and paleoclimatology of this important period.

In 1991, Goodyear completed a written synthesis of Paleoindian research in the Southeast as seen from a geoarchaeological perspective. This manuscript, "The Early Holocene Occupation of the Southeastern United States: A Geoarchaeological Summary" is to be included in a volume published by the Center for the Study of the First Americans. A limited number of copies of this paper were printed and distributed to colleagues for review and comment (Goodyear 1991).
THE SCIAA RESEARCH LIBRARY

The SCIAA Research Library, which is administered by the Research Division, is managed on a daily basis by Nena Powell who functions as its librarian. As librarian, she maintains the regular journal subscriptions and purchases new books as provided by the $2,500 line item budget. For 1991, 26 journals and 36 books were ordered. In addition to these volumes, the Research Library receives books, reports, journals and newsletters from approximately 50 other sources such as institutions and societies on a gratis or exchange basis. The library continues to have growth through donations of books, reports and journal by colleagues and other friends. In 1991, a total of 337 books and journals were donated. Each new volume is entered into a computer catalog maintained by Powell and shelved according to an internal code. This code contains approximately 218 subject categories and 410 journal titles. A map has been constructed to aid users in locating books and journals. For 1991, a total of 832 new books, journals, newsletters, reprints, and videos were entered into the catalog and shelved.

A major source of help in 1991 toward increasing the library holdings, was a financial contribution given by the staff of the Savannah River Archaeological Research Program. SRARP made a donation of $2,000 from the overhead earnings of that program to enhance the Research Library. In 1989, an endowed fund named the Robert L. Stephenson Library Trust Fund was established through private contributions by friends and admirers of Dr. Robert L. Stephenson and his library. Dr. Stephenson donated his considerable personal library to the Institute in 1985, not long after his retirement in 1984 as the former Director. The Stephenson collection continues to represent the core of the library’s holdings and is especially valuable for its rare and out-of-print publications, many of which date to the turn of the century. In order to build the principal of the trust fund, none of the interest has yet been spent. As of the end of 1991, the fund had grown to a total of $7,744. One cash contribution of $24 was made during this year to the fund by George S. Lewis. The 337 volumes contributed in 1991 were given variously by Robert N. Strickland, Stanley South, Charles Edward, Bruce Rippeteau, and Albert C. Goodyear. It is clear that one of the chief means by which the Research Library will grow in size and quality will be through financial donations to the Robert L. Stephenson Library Trust Fund and through the giving of books and other needed publications from private sources.
In 1990, after having worked as an archaeologist with SCIAA essentially full-time since 1976, James L. Michie left the Institute and the Columbia campus to take a position as instructor and Associate Director of the Waccamaw Center for Historical and Cultural Studies at USC-Coastal Carolina in Conway, South Carolina. His faculty appointment there is with the Department of History. In 1991 he was promoted to Assistant Professor. As Associate Director of the Center, he is responsible for the archaeology which is being conducted through the Waccamaw Center for Historical and Cultural Studies, Dr. Charles Joyner, Director. By mutual agreement through the good offices of Dr. Ronald G. Eaglin, Chancellor of USC-Coastal Carolina, and Dr. Bruce Rippeteau, Director of SCIAA, the Waccamaw Center is formally connected with the South Carolina Institute of Archaeology and Anthropology. The Center lists itself as an Associate of SCIAA and SCIAA in turn recognizes Michie as a Program Director and Principal Investigator.

Prior to his leaving the employ of SCIAA in 1990, Michie had conducted several important research projects both at Wachesaw Plantation near Murrell's Inlet and in the Congaree Creek vicinity near Columbia. His several important research contributions were inadvertently left out of the 1987-88 and 1989-90 SCIAA Annual Reports, an oversight that is corrected for those years in the present report.

In 1989, through a grant from the state legislature, Michie conducted a subsurface survey of the first terrace of the Congaree River southeast of the town of Cayce searching for the remains of Old Fort Congaree. Based on maps and other historical documents, the Old Fort Congaree of 1718 had long been suspected to have been built in the vicinity of where Congaree Creek flows near the Congaree River. At the end of the field season in mid 1989, after several weeks of testing with negative findings, good evidence in the form of moat remnants and diagnostic European artifacts were found near Congaree Creek, allowing with high probability the claim of discovery of the fort. Thus, using the tools of archaeology, Michie finally relocated the 1718 fort which played such a prominent role in the colonization of the South Carolina upcountry. A preliminary report documenting the discovery has been published as Research Manuscript Series 208. Analysis of the artifacts is underway and plans are being considered for more intensive excavation and possible restoration of the fort.

As part of the four years of excavation (1984-1988) that Michie undertook at the Wachesaw Plantation development near Murrell’s Inlet, South Carolina, work that resulted in the excavation of a complete rice plantation with all of its architectural aspects, it was proposed that a popularly oriented book be written to bring the findings to the public. Funding from private sources was successfully sought in 1988 and in 1989 Michie was underwritten to write such a book. This book, Richmond Hill Plantation, 1810-1868: The Discovery of Antebellum Life on a Waccamaw Rice Plantation, was
published in 1990 by the Reprint Company. Michie was honored in 1991 by SCIAA with a book reception held at the USC Faculty House. He was also honored in 1991 by Dr. Charles Joyner, Director of the Waccamaw Center for Historical and Cultural Studies at USC Coastal Carolina, with a book reception at that campus. He was again honored at an Author's Luncheon held at Myrtle Beach. The book has sold well and can be ordered through the author and through SCIAA.

Beginning in 1990 and continuing through early 1991, as a major beginning in the development of archaeological and historical research from the Waccamaw Center, Michie conducted a survey in search of the lost early 16th century town of San Miguel De Gualdape. Funding for the survey was provided by the Georgetown Historical Society through the Waccamaw Center. According to the historian Paul Quattlebaum, the Lucas Vazquez de Ayllon expedition of 1526, after having landed on the Cape Fear River in North Carolina, moved south to settle on the eastern banks of Winyah Bay near the present town of Georgetown, South Carolina. The locality that best matches the probable location on Winyah Bay is known generally as Hobcaw and more officially as the Belle W. Baruch Foundation property. Nearly three miles of coastline were examined using shovel tests excavated along transects. No artifacts diagnostic of the 16th century were encountered, thus concluding that Ayllon's colony was probably located elsewhere. In all likelihood, Ayllon made initial landfall in either the South Santee River or Winyah Bay but relocated south to the coast of Georgia, perhaps on what is now Sapelo Island. Immediately following the transect surveys, beaches associated with the mentioned embayments were searched in the hopes of finding artifactual remains of the wrecked flagship, the Capitana, which sank when Ayllon made landfall. Although many miles of beach were thoroughly walked, no archaeological evidence could be found of the shipwreck.

In the spring of 1991, investigations were undertaken in an unoccupied portion of the cemetery at Indiantown Presbyterian Church in Hemingway. Members of the church requested help in locating the original church built during the first half of the 18th century. Long narrow transects were surveyed with the result that no evidence of a church structure was found. Several unmarked graves previously unknown to the church were found, however.

In May, Michie investigated a slave cabin at Richmond Hill plantation with the aid of students in his 591A field methods class from USC Coastal Carolina. An 11% sample of the cabin area was excavated. Some months later, William M. Weeks, a Research Fellow with the Waccamaw Center, began a complete excavation of another slave cabin at Richmond Hill plantation. In the fall, Michie began testing some prehistoric sites on the lower end of the Waccamaw River in the hopes of finding multi-component occupations. These tests generally revealed an impressive amount of ceramic continuity spanning some 3,500 years. Archaic and earlier occupations were virtually absent. In addition to finding these ceramic sequences, what appeared to be a smudge pit filled with charred corn cobs was encountered. The cobs were submitted to Beta Analytic, Inc. for radiocarbon dating with a result of a C13/C14 adjusted date of 370 years B.P. (A.D. 1520- A.D. 1640).
1991 was a busy year for Steven D. Smith, Deputy State Archaeologist. He developed and completed the MOA with the State Historic Preservation Office on Compliance Responsibilities between agencies as well as continuing negotiations on the Brown's Ferry Vessel. He and Christopher Judge had a looter at Nipper Creek Heritage Preserve arrested. Also, Smith and Dr. Linda France Stine were co-principal investigators of the Charleston County Archaeological Inventory for the Charleston County Planning Office. The project began in 1990 and was completed in 1991.

Dr. Jonathan M. Leader was named acting Deputy State Archaeologist in July. Mr. Smith, who had been Deputy State Archaeologist, accepted a position with the Midwestern Archaeological Research Center (MARC) located at the University of Illinois, Normal. Dr. Leader was confirmed as Deputy State Archaeologist in November.

CONSERVATION

The Conservation Division continued to expend the majority of its energy on the Brown's Ferry Vessel. Dr. Jonathan Leader, Conservator, and Mr. Harold Fortune, Conservation Technician, emptied the wood conservation tank with the assistance of the City of Columbia and the Department of Health Environmental Control. The vessel appears to be fully stabilized and will be undergoing additional tests. All the SCIAA divisions have provided volunteers for the initial cleaning of the timbers and Mr. Frederick Hocker of Texas A and M University is consulting on the project. Meanwhile, the University Purchasing Office and Facilities Planning Office have been instrumental in helping the project negotiate the state requirements for goods and services central to the project. The Crane company, which was involved with the original moving of the vessel to the facility, was awarded the contract to move the vessel onto its preparation scaffolding by the University. A special support structure that incorporated and improved upon the original support structure allowed the vessel to be moved into position in less than four hours. Now that the vessel is in final preparation, the Rice Museum in Georgetown, South Carolina is moving ahead with the necessary work to select and prepare its exhibit hall.

CURATION

Ninety cubic feet of archaeological materials were formally transferred to SCIAA for curation in 1991. In addition to materials that were generated by in-house projects, this total includes artifact collections received from other agencies - the South Carolina Department of Highways and Public Transportation, the South Carolina Department of Parks, Recreation and
Tourism, and the USDA Forest Service; other University of South Carolina departments - the Department of Anthropology and the McKissick Museum; and from private archaeological contractors - AF Consultants, Brockington and Associates, Inc., Chicora Foundation, Inc., New South Associates, and Southeastern Archeological Services, Inc.

The following materials were donated to SCIAA's permanent curated collections by private citizens in 1991:

- Late 19th-early 20th century artifacts from Lexington County by Kenneth E. Peters of Chapin, South Carolina
- Prehistoric lithic artifacts from Newberry County by M. Mayer Bouknight of Savannah, Georgia
- Prehistoric lithic artifacts from Abbeville County by Larry Wilbanks of Anderson, South Carolina
- A rhyolite Savannah River point from Newberry County by Gayle R. Swanson of Chapin, South Carolina
- Prehistoric lithic artifacts from Richland County by Malinda and Joseph Archie of Columbia, South Carolina

Three institutions requested the loan of Colono Ware vessels from SCIAA's collections for exhibition use in 1991. The Museum of the Confederacy, Richmond, Virginia borrowed two vessels from Hampton Plantation (Charleston County, South Carolina) for their traveling exhibit entitled, "Before Freedom Came: African-American Life in the Antebellum South". After opening in Richmond from July to December 1991, the exhibit then traveled to the McKissick Museum, University of South Carolina, Columbia from January to March 1992. Its final venue was the National Afro-American Museum and Cultural Center, Wilberforce, Ohio from April to June 1992. A catalog produced in conjunction with the exhibit includes a photograph of one of the borrowed vessels (Plate 15, page 69).
Several pieces of Colono Ware from the Spiers Landing Site and from Yaughan and Curriboo Plantations (all Berkeley County, South Carolina) were loaned to The Charleston Museum, Charleston, South Carolina for their exhibition, "Links in a Chain: The Significance of African-American Labor". The exhibit ran from July 1991 through February 1992.

The loan of two Colono Ware vessels to the National Museum of American History, Smithsonian Institution, Washington, D.C. was extended for another year. The vessels, one from Mepkin Abbey (Berkeley County, South Carolina) and the other from Bluff Plantation (Colleton County, South Carolina), have been shown in the exhibit, "After the Revolution: Everyday Life in America, 1780-1800", since 1985.
The Information Management Division (IMD) spent most of 1991 completing the South Carolina Archaeological Bibliography Project. The project was begun in September 1990 and the finished bibliography sent to press in early November of 1991. Data input and initial editing were conducted from January to June 1991, with final input, content and copy editing, and camera ready production taking place from June through early November.

The end result, *A Comprehensive Bibliography of South Carolina Archaeology*, is a 476 page, 3400 source bibliography published as SCIAA Research Manuscript Series (RMS) 211. In early 1992, SCIAA was notified by The South Carolina State Library that the bibliography had been named one of the ten most notable South Carolina State Documents of 1991 and was so awarded.

In addition to the published RMS, the project also resulted in a disk version of the bibliography which was provided to the Interagency Archeological Services Division, Southeast Regional Office, National Park Service for inclusion in the National Archeological Database (NADB).

The bibliography project was designed to accomplish a number of interrelated goals:

1) To locate and record the known written sources on South Carolina archaeology.
2) To enter the bibliographic information for each source into a computerized database.
3) To acquire copies of the sources for the IMD office to supplement the Statewide Archaeological Site Files.
4) To produce a published version of the bibliography for distribution to the professional community.
5) To maintain the bibliography in perpetuity.

The project was highly successful in realizing these goals. The computerized bibliographic database is now in place and used on a daily basis to quickly and efficiently identify informational resources. The entry of new sources is also ongoing, thereby allowing periodic updates of the bibliography to be published. The acquisition of source copies for research use in the IMD office continues as well.

Personnel involved in the research, compilation, data entry, and editing phases of the project included Keith M. Derting, Sharon L. Pekrul, and Charles J. Rinehart. Jamie Browne, SCIAA Underwater Division Administrative Specialist, acted as Computer Consultant and Production Editor throughout. Keith M. Derting served as Project Manager and Steven D. Smith as Principal Investigator.

In addition to the bibliography project, 1,136 new archaeological sites were processed into the Statewide Archaeological Site Files during 1991, increasing the recorded total to over 14,000 sites. The IMD also continued to assist the South Carolina Water Resources Commission in gathering archaeological site information for their Natural Resources Decision System Database.

Ms. Paige Burtram, an undergraduate anthropology student at USC, volunteered her assistance with both IMD and Curation tasks in the spring of 1991. In the fall, Mr. Douglas Weiner of Spring Valley High School conducted an Internship Program with the IMD, assisting both in that office as well as with work in other SCIAA divisions.
The Savannah River Archaeological Research Program (SRARP) continued through fiscal year 1991 with the United States Department of Energy to fulfill a threefold mission of cultural resource management, research, and public education at the Savannah River Site. Two documents produced in fiscal year 1990 laid the groundwork for ongoing operations. One document comprised a synthesis of prehistoric archaeological investigations conducted on the SRS since 1973. The other document, which includes a Programmatic Memorandum of Agreement (PMOA) among the United States Department of Energy-Savannah River Site, the South Carolina State Historic Preservation Office and the Advisory Council on Historic Preservation, is an Archaeological Resource Management Plan (ARMP) that combined the results of the prehistoric synthesis with data on historic period resources. The ARMP specifies the extant knowledge of archaeological site distribution and significance on the SRS, details potential impacts resulting from SRS operations, and provides a predictive model for locating and evaluating these resources. Implementing procedures are outlined in the SRARP FY90 Annual Review.

Over 3500 acres of land on the SRS came under cultural resources review in 1991. This activity entailed 89 field surveys, resulting in the recording of 34 new sites. Nineteen existing sites within survey tract boundaries were revisited to update site file records.

Research conducted by SRARP was reported in five journal articles and three monographs published during fiscal year 1991. SRARP staff also presented research results at eleven professional meetings, and organized and chaired two symposia.

In the area of public education, the SRARP continued to intensify its service activities in fiscal year 1991. Volunteer excavations at the Tinker Creek site (38AK224) were continued with the Augusta Archaeological Society and other avocational groups. Over two dozen presentations and displays were provided for schools, historical societies, civic groups, and environmental and historical awareness day celebrations. Additionally, SRARP staff taught seven archaeology/anthropology courses at area colleges and universities. Staff members were invited guest lecturers for other courses as well.

Savannah River Archaeological Research Papers 2

Occasional Papers of the
Savannah River Archaeological Research Program
South Carolina Institute of Archaeology and Anthropology
University of South Carolina
The signal achievement of the Division during 1991 was the revision of the Underwater Antiquities Act in the form of HR 3739, signed into law on June 12th. The new law made important changes in the original, laying the foundation for practical protection of underwater cultural resources while also providing a framework for greater State-Sport Diver interaction. The result has been elimination of the troublesome ethics of previously state sanctioned salvage operations in our waters and the development of training programs for sport divers which will hopefully instill in them a greater awareness of their responsibility to the people of the State in the protection of submerged cultural resources. The new law was written by Christopher Amer in consultation with Lynn Harris and other SCIAA staff, other state and federal agencies and other State cultural resource management programs. Once written, Amer faced the monumental task of developing a public information program designed to air the revisions and get public input followed by the task of steering the law through the legislative process. The latter was accomplished with the extensive assistance of the Deputy State Archaeologist Steven Smith. When the Law was passed a special SCIAA announcement was made by the Director with personal recognition for Amer's work - which occupied half of the working year.

SPORT DIVER ARCHAEOLOGY MANAGEMENT PROGRAM

As a follow up to the new Antiquities Act, the Sport Diver Archaeology Management Program (SDAMP) entered its second year of operation by staffing two field training schools during the year. Sixteen new "Certified Archaeological Dive Instructors" and "Certified Archaeological Divers" were graduated. The instructors were certified to give archaeological diver courses (on personal time in the case of SCIAA staffers) in order to rapidly expand the impact of the SCIAA designed course on the State's sport diver community. Dive store owners began using the course immediately. The first SCIAA instructor course was given by Mark Newell for a group of 20 sport divers from Augusta, Georgia. The Program's Underwater Archaeology Dive Manual, authored by Lynn Harris and first published last year, has proved a popular item among sport divers and went into a second printing during the year.

The newsletter, The Goody Bag, went into its second year of production under the co-editorship of Lynn Harris and the Division's Administrative Specialist Jamie Browne. The newsletter provided news and background information on local diving and archaeology underwater conducted in the State with articles contributed by Christopher Amer, Lynn Harris, Mark Newell and Carleton Naylor.

At the same time as these offerings were made to the sport diving community, concrete steps were finally made to begin
enforcement programs for the licensing side of the Antiquities Act. Using the Division's new boat, the Pelican, Harris and Naylor cruised coastal plain rivers alerting divers to the need for a hobby license and advising that citations would be issued and artifacts illegally recovered from State lands confiscated during 1992 for failure to comply. A new brochure on the revision to the law was developed by Lynn Harris and Mark Newell for distribution during these license checks.

A major diver collection was documented by Lynn Harris during the year, that of James Cooler. Cooler had recovered a complete range of artifacts from the wreck of the S.S. Lawrence off Hilton Head. Site visits by the Division were also made in connection with this project and plans were advanced for developing the site as the first archaeological/biological preserve for sport divers. Publication of the Cooler collection is planned.

Hampton Shuping, of Conway, SC organized a sport diver survey of the waterfront off several historic plantations in the Waccamaw River under the direction of Lynn Harris and in consultation with Mark Newell. The site produced a number of rice barges and a possible ferry. Shuping set up a long term documentation project in which area sport divers were taught by SCIAA staffers how to recover information from the various craft. The 1991 "season" lasted from April to October with more work and a publication planned for 1992.

**COMPLIANCE**

Review and compliance activities continued under the direction of Mark Newell who conducted initial reviews and generated SCIAA's official comments for underwater permit applications. David Beard began work on the development of a data base for use in predictive modeling and provided follow-up reviews of possible sensitive sites to be adversely affected by permitted development. In Columbia, Steven Smith and Christopher Amer worked on a Memorandum of Understanding with the State Historic Preservation Office and the South Carolina Coastal Council on formalizing the review and comment process.

Evidence that the system was working came with a call to the Division concerning the discovery of a wooden vessel during the construction of a dock in Hobcaw Creek near Charleston Harbor. Field Archaeologist, David Beard visited the site along with Division staffers Christopher Amer, Lynn Harris and Mark Newell. The wreck is believed to be an early 19th century vessel of undetermined type, possibly a coasting schooner or a pirogue.

David Beard also experimented with a method for defeating attempts of looters to disturb the Little Landing Site in the Cooper River. A layer of chain-link fence donated by the University of South Carolina was laid over the site and then buried beneath 10cm of sand and gravel. The site will be checked for further vandalism next year.

The field portion of a compliance contract was completed for the City.
of Conway during late June. The city planned to develop its waterfront area on the Waccamaw River and the proposed work would have impacted two historic (National Register) warehouses and known submerged sites in front of the warehouses. The entire Division staff spent ten days surveying the waterfront area where pilings for an extensive walkway were to be installed. The survey found nothing worthy of National Register nomination, although the remains of several small craft and an industrial cart or trolley were documented. A management summary of no adverse effect was issued after the fieldwork and the project was subsequently permitted by the South Carolina Coastal Council and U.S. Army Corps of Engineers. The project Principal Investigator was Christopher Amer, who will oversee publication of a full report.

Three additional compliance surveys were made during the year with David Beard as Field Archaeologist. These were at Cedar Grove Plantation Landing, Archdale Plantation Landing and the Lexington Kiln Site. The surveys were generated by dock and marina permit applications. Following these surveys, David Beard investigated the potential for development of a data base using archival plats, maps and aerial photography to determine if a predictive model could be built for location of historic landings and causeways by topographical features.

**RESEARCH**

**The Malcolm Boat**

Early in the year word was received from the South Carolina Department of Archives and History that a grant application written by Mark Newell for investigation and stabilization of a wooden vessel site on the Ashley River would be funded. The project centered around what was thought to be an early 19th century vessel eroding from a mudbank near Archdale Plantation. Preparations were made for a Spring 1992 project with David Beard assigned as Principal Investigator.

**Hunting Island Vessel**

Christopher Amer continued with his analysis of the remains of the Hunting Island Vessel, a small fishing craft of the 19th century for which field work was completed last year. Analysis of the site includes development of scale drawings, photo mosaics and lab work. Artifacts recovered from within the hull of the vessel and the presence of a "live well" in the hull suggest an early 19th century provenance for the boat. Amer will present his findings
at the Conference on Underwater Archaeology next year and is planning publication of a report in 1993.

**Small Craft Studies**

Mark Newell continues vernacular craft studies with weekend documentation of sites. He also worked with avocational historian William R. Judd on several unique chine girder barges Judd has located in the Edisto and Combahee Rivers. Judd's work, especially his excellent construction drawings, continue to undergo refinement and are making a valuable contribution. Newell documented a phosphate barge at Pon Pon during an SDAMP field school and continued site visits and archival research aimed at developing a preliminary typology of South Carolina water craft.

**Edisto River Survey**

In Spring of the year SCIAA staff under the direction of Christopher Amer conducted a preliminary survey of areas of the Edisto River. Several small craft sites were located and investigated including barges and sailing craft. South Carolina Site Forms were completed on all sites found.

**DIVING SAFETY**

The Division upheld safe diving practices throughout 1991 under the auspices of the Dive Safety and Control Board. The condition of the Division's boats, excavation and dive equipment was monitored by our Archaeological Technicians Joe Beatty and Carleton Naylor who are responsible for equipment maintenance. For the fourth consecutive year no diving related incidents nor accidents occurred.

**GENERAL SCIAA SUPPORT**

During the year SCIAA launched its new internal funding body, The Archaeological Research Trust (ART). Director Bruce Rippeteau appointed Mark Newell to the ad hoc formation committee and later to the Board of Trustees of the new organization. Newell with Tommy Charles wrote and designed the initial brochure explaining ART. He designed the Fund's logo based on a complicated stamp pattern. Newell also wrote and designed displays for the front lobby of SCIAA, fabricating the displays with Tommy Charles and Harold Fortune and using the services of the USC Printing Department and Graphic Arts Department.

Joe Beatty spent several weeks assisting Chester DePratter in his excavation at Groton Plantation.

In her final year as the Division's Administrative Specialist, Jamie Browne developed and maintained a data base of the State's Hobby divers, co-edited *The Goody Bag*, and lent her computer expertise for the completion of the Information Management Division's Bibliography of South Carolina Archaeology.

21
The 1991 creation of an Archaeological Research Trust for SCIAA is a good dream come true! Since 1984, some stalwart women and men within SCIAA have met and advocated several programs for the private enhancement of SCIAA's already excellent but publicly-funded service and research.

Of these free ideas and good people came the concept that private funds should be sought to further illuminate South Carolina's archaeological heritage. Thus it was that four founding SCIAA members (Albert Goodyear, Tommy Charles, Mark Newell, and Dr. Bruce Rippeteau), two citizens (Roland Young of Columbia and Miller Ingram of Cheraw), and Harriette Wunder of the USC Educational Foundation all met on 14 November 1991 and the Archaeological Research Trust (ART) came into existence. Since then, and pursuant to the Bylaws, two more stalwarts have been added: Tony Harper of Greenville and Shipp Harris of Columbia, thus rounding out the Board.

The ART purpose is set forth in Articles II and III of the Bylaws. To summarize, ART is entrusted to solicit and manage funds from the private sector for the purposes of enhancing SCIAA capabilities and knowledge in the fields of research, conservation, and education.

ART is independent of SCIAA. It has eight members: four from the community and four from SCIAA (seven vote; the eighth is the Director of SCIAA who is ex officio) who serve overlapping terms of two years. Business is conducted at regular meetings with standard organization and balances pursuant to USC and state law.

Moneys raised are approved for either general purposes as above or in accordance with the donors' wishes. The ART expenditures, having met Board review and approval, are authorized by the SCIAA Director with the University of South Carolina Educational Foundation having fiduciary responsibility on behalf of ART.

The initial fund raising year under Chairman Roland Young and Campaign Drive Chairman Albert Goodyear has gone well. Although an initial endowment of $100,000 was sought, ART has done very well indeed in these hard times to have raised over one-fourth of that at the time of writing.

It is hoped that all who can will have given this first year. Hereafter, those who gave in 1991 and 1992 will be known as Founders and will be emblazoned on our plaque.

ART is planning several special recognitions of donors. However, all work and hopes are ultimately for the private enhancement of SCIAA's central and nationally-excellent role of archaeological research in South Carolina.

This page: ART brochure.
In 1991, under the direction of ASSC President William E. Westbrook, the Society continued its annual spring and fall statewide meetings and local chapters continued to meet throughout the state. The chapters of the Society include the Charleston Area Chapter which meets at the College of Charleston, the Low Country Chapter of Beaufort, South Carolina (inactive in 1991), the Allendale Chapter which meets at USC-Salkehatchee, the Anderson Chapter which meets at Starr Elementary School in Starr, the newly organized York County Chapter which meets at the Museum of York County, and the newly organized Little Pee Dee Chapter which meets at USC-Coastal Carolina College. The Archaeological Society of South Carolina (ASSC) is sponsored by SCIAA and the State Archaeologist sits permanently on its board of directors.

The regular publications of the Society are the newsletter, Features and Profiles, edited by Nena Powell, and the journal, South Carolina Antiquities, edited by Kenneth Sassaman. Fund raising efforts were continued in 1991 through the Archaeology Field Day auction, T-shirt sales, and sales of publications and back issues of the journal to increase revenue for additional publications and other worthy projects. In 1991, a new grant program was established, the Grant-In-Aid for Graduate Student Research. This is a fund from which grants are made to graduate students working on a masters thesis or Ph.D. dissertation that concerns the archaeology of South Carolina. Funds are collected from seed money provided by the Society plus donations from archaeological consulting companies and other professional organizations.

The 17th Annual Conference on South Carolina Archaeology was held at USC on April 13, 1991. The keynote speaker was Dr. Frank F. Schambach of the Arkansas Archeological Survey who spoke on prehistoric Caddoan archaeology in Arkansas. The Archaeologist of Year Award went to Miller Ingram of Cheraw, South Carolina. Publication of the Year Award went to co-winners William B. Weeks and Col. William L. Koob. An Outstanding Service Award was given to Jack G. Willhoit for donating the cost of printing the Society’s second occasional paper The Earliest South Carolinians, The Paleoindian Occupation of South Carolina.

THE FOURTH ANNUAL ARCHAEOLOGY FIELD DAY

The Fourth Annual Archaeology Field Day was an overwhelming success this year which brought a crowd of over a thousand people to Santee State Park on Saturday, September 28, 1991. Members of the Archaeological Society of South Carolina and people of the general public, including school groups and scout troops, gathered on the periphery of an open field and watched as program participants fired Catawba pottery in open fire pits, tanned hides with animal brains, and demonstrated bow and atlatl throwing, blowguns, and firemaking. Several people from the Institute participated. Chris Judge coordinated local arrangements, the program, and all craft demonstrating activities. Tommy Charles sat all day among great crowds of people identifying their private collections. Jonathan Leader tantalized the crowds with Native American myths and stories. Chris Amer, Joe Beatty, and David Beard demonstrated underwater archaeological techniques. Ken Sassaman demonstrated water-screening techniques. Nena Powell coordinated local arrangements, the auction, and registration.
In the afternoon, Dr. Leland Ferguson from the Department of Anthropology gave his now famous "Sermon on the Mound" lecture on the top of Santee Indian Mound at Fort Watson. The Annual Auction was a great success which brought in $1,734.00 for the Society's Trust Fund. As usual, Albert Goodyear and Ken Sassaman were the entertaining auctioneers who made this event incredibly successful. Thanks is extended to all SCIAA staff who donated and bought items for the auction (over 58 items were donated).

The day was capped off with Sammy Lee's delicious bar-b-que, and for the first time, we had Native American dancers from the Edisto Indian Council demonstrate traditional dances around a blazing bonfire. The event was sponsored by the Archaeological Society of South Carolina and hosted graciously by the SC State Department of Parks, Recreation, and Tourism. The Officers and Board of Directors have already made tentative plans to hold the event at Santee State Park next year, same time and place - Saturday, September 26, 1992.
In addition to the above mentioned individuals, six graduate students (Dean Foster, Ty Fuglseth, Keith Krawczynski, Cara Lewis, Catherine Naufal, and Mary Roe) were awarded assistantships to work with the SCIAA staff as part of the Institute's ongoing commitment to higher education.

Twenty seven temporary staff members were also hired for short term projects in a variety of capacities. They are: Elizabeth Abel, Phillip Abernathy, Melanie Cabak, Ashley Chapman, James Errante, Neil Fennell, Tammy Forehand, William Green, Barbara Hiott, Cristine Korvink, George Lewis, David McKivergan, Kristina Monaco, Kristine Norton, Darby Reide, Charles Rinehart, Cameron Sebastian, Carole Shealy, Jason Smith, Pam Starling, Carl Steen, Donald Stephenson, Linda Stine, Doug Warnock, Janet Weatherly, Linda Wollert, and Margaret Wyman.

DIVISIONS:  ADM = Administration, OSA = Office of the State Archaeologist, RES = Research, UW = Underwater, SRARP = Savannah River Archaeological Research Program.

• Member of Senior Advisory Council, SCIAA.
• Alternate Member, Advisory Board, South Carolina Heritage Trust.
• Organizer of James L. Michie Book Reception (Richmond Hill Plantation 1810-1868) at the Faculty House, University of South Carolina.
• Member of the Board of Trustees, Archaeological Research Trust, SCIAA, University of South Carolina.
• Chair of the 1992 Endowment Fund Drive for the Archaeological Research Trust, SCIAA, University of South Carolina.

Leader, Jonathan
Member, Academic Affairs Committee, SCIAA.

Pekrul, Sharon L.
• Member, Membership Qualifications Committee, Council of South Carolina Professional Archaeologists.

Rippeteau, Bruce
• Horseshoe Advisory Committee
• Research Advisory Committee
• Member, Academic Affairs Committee, SCIAA
• Chairman, Advisory Board, the South Carolina Heritage Trust.
• Board Member, OSHA Dive Safety and Control Board for the South Carolina Institute of Archaeology and Anthropology.
• Member, South Carolina Quincentennial Commission (but appointed Dr. Chester DePratter to represent).
• Charter Member, Board Member, The Archaeological Research Trust, the South Carolina Institute of Archaeology and Anthropology.
• Board Member, Archaeological Society of South Carolina
• Member, Joint Legislative Committee on Cultural Affairs.

Smith, Steven D.
• Secretary, South Carolina Columbian Quincentennial Commission.
• Member, Strategic Planning Committee, South Carolina Heritage Trust.
• Member, Joint Legislative Committee on Cultural Affairs.
H. CONSULTATIONS

Crass, David C.
January and March 1991
Consultation at Augusta College, Augusta, GA.

DePratter, Chester B.
• Script consultation, DeSoto radio project, "Child of the Sun."
• Santa Elena exhibit consultation.
  McKissick Museum, University of South Carolina, Columbia.

Goodyear, Albert C.
• National Geographic Society
• Current Anthropology
• Earthwatch
• Florida Museum of Natural History

Leader, Jonathan
• Long Pond Site Project.
  University of Connecticut, Storrs, Connecticut.
• Engine Project, Coastal Heritage Society, Savannah, Georgia.
• Conservation Laboratory Project, State Historic Preservation Office, San Juan, Puerto Rico.
• West Point Foundry Project, Texas A&M University, College Station, Texas.

Smith, Steven D.
• Humanities Scholar, Resource Team for Interpretive Programming at Abbeville's Burt-Stark Mansion, Abbeville, South Carolina.

South, Stanley
• American Anthropologist
• American Antiquity
• National Endowment for the Humanities
• National Science Foundation

1989
The Search for Old Fort Congaree, Lexington County, South Carolina. South Carolina Legislature, SCIAA ($20,000).

1990
• The Search for San Miguel De Guadape. Georgetown County Historical Society, Waccamaw Center for Historical and Cultural Studies, USC-Coastal Carolina College ($10,300).
• Field Equipment Grant. Exxon Annuitant Association, Waccamaw Center for Historical and Cultural Studies, USC-Coastal Carolina College ($1,000).

1991
Field Equipment Grant. Exxon Annuitant Association, Waccamaw Center for Historical and Cultural Studies, USC-Coastal Carolina College ($1,000).
• Archaeological Research Assistance Grant. Private sources, Waccamaw Center for Historical and Cultural Studies, USC-Coastal Carolina College ($5,000).

Rippeteau, Bruce

Fiduciary and performance responsibility as Director for $800,000.00 of grants and contracts.

South, Stanley and Chester DePratter

• Santa Elena research project. Robert L. Stephenson Archaeological Research Fund ($2,500).
• Santa Elena research project. Columbian Quincentennial Commission of South Carolina, via Chester DePratter.
The South Carolina Institute of Archaeology and Anthropology (SCIAA), an administrative unit of the University of South Carolina, serves as the main state agency concerned with South Carolina's prehistoric and historic archaeology. It is both a university research institute and a state agency standing with the State Museum and the State Department of Archives and History. SCIAA operates under SC. Statutes 60-13-210 et. seq., the enabling act for SCIAA, and 54-7-400 et. seq., the Underwater Antiquities act, and is named in others.

SCIAA's research programs span 14,000 years of human occupation in the southeastern United States, from the earliest evidence of people in North America through historical times. SCIAA's dual role as a state agency and a university research institute combines research and public service. This responsibility is implemented in classroom activities, in coordination with other governing bodies, at conferences, and directly by fieldwork where the vital data is being rapidly altered or lost. SCIAA stresses the importance of human prehistory and history in terms of material remains and their contexts and coordinates each project to derive the maximum benefit for research and public service. SCIAA is committed to providing the finest support for archaeological science and resource management in South Carolina.

During 1991, the internal organization of the Institute comprised the following divisions:

1) Administrative: Director and State Archaeologist, Business Manager, Special Assistant, Institute Secretary and Buildings Manager
2) Office of the State Archaeologist: Deputy State Archaeologist, Information Management, Curation, Conservation and Publications
3) Underwater Archaeology: Deputy State Archaeologist for Underwater, who with his staff engages in a wide variety of research, compliance and underwater archaeological training activities from both the Columbia office and from their office on the N.S. Savannah in Charleston Harbor
4) Research: Associate Director for Research and his staff cover a spectrum of historical and prehistorical archaeology
5) Savannah River Archaeological Research Program: a large ongoing research and management contract with United States Department of Energy (DOE), located in Aiken, South Carolina at DOE's Savannah River Site (SRS).

**SCIAA FACILITIES**

Headquarters: 1321 Pendleton St., USC Campus
State Curation Facility: 700 College St., USC Campus
Underwater Field Office: NS Savannah, Charleston, SC
Conservation Facility: 510 Assembly St., USC Campus
SRARP/DOE: Savannah River Plant, Aiken, SC
Joint Archaeology Lab: USC-Coastal Carolina, Conway, SC
Santee State Park, site of the Fourth Annual Archaeology Field Day hosted by the Archaeological Society of South Carolina (sponsored by SCIAA).
