Publication date is approximate.
Archeological resources are those remains of human occupation, prehistoric or historic, that may be found on or beneath the surface of the ground by careful, scientific excavation. They may be the remains of prehistoric Indian occupations such as chipped stone tools, pottery, bone tools, shell or other implements or other artifacts. They may be remains of campfires, the post holes where wall posts of houses or palisades once stood, underground storage or refuse pits, fragments of food remains, or other evidence of prehistoric Indians having been there. They may be above ground remains such as earthen mounds, trails, agricultural fields, etc.

These prehistoric archeological resources are grouped and classified in various ways by the archeologist to analyze their historic and cultural meaning. These groupings may be by cultural content, by socio-economic groups, or by time periods. In South Carolina these resources, or archeological sites, extend throughout all or nearly all of the time span of man's occupation of the New World, and embrace a distinctive series of socio-economic patterns or "ways of life". They range from the simplest Early Man sites of 10,000 or more years ago, when man depended, in part, on large game animals for his economic existence; through the Archaic hunting and gathering period; the beginnings of agriculture; the development of major agricultural economy, and cere-
monial centers; to the times of historic contact with the European colonists.

Archaeological resources may also be historic, non-Indian sites of European or African origin. These begin with the sites of the earliest Spanish, French, and English explorers of the 16th century and extend to modern times. They include fortifications, houses, communities, shipwrecks, trails, farms, cemeteries, churches, slave quarters, and the structures as well as artifacts that are found at these sites. Historic sites, more often than prehistoric sites, contain above-ground ruins, as for example, historic houses, tombstones, or fortifications some of which may be in well-preserved condition. Even with these, however, there are sub-surface archaeological remains that require excavation in order to interpret the story of the site. Also, historic sites have the added advantage that there are usually some contemporary documents that help describe and explain the site.

Whether historic or prehistoric, these archaeological resources are the remains of human occupation and they lie on or beneath the surface of the ground. They are the physical remains that can be excavated, measured, studied, and interpreted by careful and competent archaeologists to tell the story (or at least some of the story) of how and when these people lived in this particular place, why they changed their ways of life, and what their relationships to their environment may have been. Once these remains are disturbed, either by archaeological excavation or construction projects or by any other means, the evidence of their existence is forever destroyed. It is essential, then, that any disturbance of these remains be done with the utmost archaeological
excavate these sites, and to interpret their meaning within the overall story of 10,000 or more years of South Carolina's history. One of the major goals of the Institute is to develop a state-wide inventory of the sites that exist. This is being done concurrently with excavations of selected ones of these sites that require immediate excavation for one reason or another. The inventory, therefore, progresses slowly but constantly. The small but competent staff of trained archeologists in the Institute is constantly adding to the inventory, searching specific areas for sites, recording specific sites reported, and testing and analysing materials from those sites.

Archeological research began in South Carolina about a century and a half ago with Dr. Blanding's excavation in some mounds on the Wateree River in the 1820s. Since then, though, there has been only spotty attempts at archeological research in the state until recent years. A dozen or two sites were sampled or partially excavated, some with adequate techniques and records, others without. The Charleston Museum records were the best effort toward an inventory of sites, but these records concentrated primarily in the vicinity of Charleston County.

In 1968, the Institute began a systematic inventory of sites within all parts of the state. The Charleston Museum kindly loaned their records for duplicating and all other sources of site data from institutions within the state and from outside the state were brought together to develop the inventory. As many of these sites as has been feasible to check on the ground have been examined and some have been tested. Some large areas have been broadly searched for sites. Some small areas have been intensively searched. Local collectors have brought
in data about sites and when possible, these have been checked on the ground. Other sites have been added to the inventory from references in the historic documents and when possible, these have been investigated. As a result of all of this, the Institute now has more than 1,100 archeological sites recorded in the inventory.

This may seem like a large number of sites, but it is really only a beginning. After four years of effort to develop this inventory of archeological resources of South Carolina, only a small percentage of the total area of the state has been intensively investigated. It is not yet possible to answer such a simple question as "Will this particular construction project (or that one) damage any archeological resources?" With few exceptions, a realistic answer can be given only after an on-the-ground search of that particular area that has been indicated for the particular construction project. The very nature of archeological sites, being mainly beneath the surface of the ground, makes even areas where some investigation has taken place, still open to question as to what archeological resources might be revealed by excavation.

The accompanying list of sites and the map indicating the county locations of these, provide more of an index of the amount of archeological work that has been done in each county than of the archeological resources that exist in each.

Specific Site Locations

It will be noted that none of these sites is precisely pinpointed as to locality. Sites are listed only as within each county. This is
necessary as a means of protecting the known sites from unauthorized
digging by well-meaning but untrained "relic collectors". If the loca-
tions of these sites were made public, there would be but very little
time pass before someone would be digging into them and thus destroying
what little remains there are of these past ways of life. In order to
protect the sites, their locations must remain confidential until there
is some means available to properly investigate them by trained archeo-
logists.

**Construction Project Procedure**

The procedure that must be adopted by any agency with any kind of
color project that changes the surface of the ground is to inquire
about that specific area by letter to the Director of the Institute of
Archeology and Anthropology, University of South Carolina, Columbia,
South Carolina 29208. This will result in a search of the inventory
records for known sites in that specific area and a letter listing the
sites, if any, that are on record. It will, with few exceptions, also
be required that a ground-search of the area be made for additional
sites before the project begins the ground-surface alterations.

**Summary**

In summary, then, it is emphasized that many kinds of archeological
resources exist in South Carolina, both of the prehistoric and historic
eras.

An inventory of these resources is being developed by the Institute
of Archeology and Anthropology of the University of South Carolina.
That inventory is barely more than begun, even though more than 1,100 sites are on record.

Specific site locations are not and cannot be indicated in order to protect these non-renewable archeological resources from being vandalized.

The procedure for any agency anticipating a construction project, is a letter to the Director of the Institute indicating the specific area of concern. Known site locations in this area will be reported to the agency probably with recommendations for further search in the area.

It is to be emphasized that a lack of sites presently on record does not indicate that none exist. With few exceptions a QUALIFIED ARCHEOLOGIST MUST INSPECT EVERY PROJECT before or during construction. The longer the lead time before construction, the less chance the archeologist has of interfering with that construction.

The following list of sites by county, the tabulation of kinds of sites for the whole state, and the state map indicate the latest information from the Institute as of July 1, 1972.

SOUTH CAROLINA
ARCHAEOLOGICAL SITES ON THE
NATIONAL REGISTER OF HISTORIC PLACES

Of 138 sites in the state of South Carolina approved for the National Register of Historic Places, the following 19 are archeological sites.

P = Prehistoric Site. H = Historic Site.

1. Camden Fortifications (38KE1), Kershaw County -H-
2. Santee Indian Mound and Fort Watson (38CR1), Clarendon County -P&H-
3. Price's Post Office (38SP1), Spartanburg County -H-
4. Pinckneyville (38UN1), Union County -H-
5. Site of Charles Towne (38CH1), Charleston County -P&H-
6. Landsford Canal (38CS5), Chester County -H-
7. Old Dorchester (38DR3), Dorchester County -H-
8. Ninety Six and Star Fort (38GR1,2,3,4, and 5), Greenwood County -H-
9. McDowell Site (38KE12), Kershaw County -P-
10. Adamson Mounds Site (38KE11), Kershaw County -P-
11. Chester Field Shell Ring (38BU29), Beaufort County -P-
12. Sea Pines Shell Ring (38BU7), Beaufort County -P-
13. Hankel Mound Shell Ring (38BU7), Charleston County -P-
14. Fig Island Shell Ring (38CH42), Charleston County -P-
15. Buzzard's Island Shell Ring (38CH23), Charleston County -P-
16. Sewee Mound Shell Ring (38CH45), Charleston County -P-
17. Auld Mound Shell Ring (38CH41), Charleston County -P-
18. Horse Island Shell Ring (38CH14), Charleston County -P-
19. Skull Creek Shell Ring (38BU8), Beaufort County -P-
SITE TYPES IN SOUTH CAROLINA

Abbeville (38AB)

4 prehistoric sites
1 village site
1 mound
2 stone circles
1 stone cairn
3 fish weir
1 prehistoric fish camp site
14 Archaic camp sites
4 Woodland sites

Aiken (38AK)

2 prehistoric sites
1 village site
1 camp site
1 sand mound
1 mound
1 cache
2 Archaic sites
2 fort-trading post ruins

Allendale (38AL)

3 village sites
2 mounds
2 shell middens
1 quarry
2 flint workshops
4 Archaic sites

Anderson (38AN)

3 Archaic camp sites
1 Mississippian village site
3 historic buildings

Bamberg (38BM)

1 Archaic site
1 historic house
1 Confederate earthwork

Total: 44 sites

Total: 31 sites

Total: 55 sites

Total: 27 sites

Total: 7 sites

### Beaufort (38BU)

2. village sites
3. mounds
3. Wilmington mound sites
1. Irene burial mound
2. burial mound sites
2. Temple mound sites
2. shell enclosures
2. shell rings
1. early ceramic shell ring
14. shell middens
2. early ceramic shell midden
4. Wilmington shell middens
2. Irene shell middens
5. Archaic sites
2. woodland sites
3. Mississippian sites

2. ceramic occupation areas
3. Multi-component sites:
   Late Archaic to Early Woodland
1. Multi-component site:
   Early Woodland to Mississippian
1. Multi-component site:
   Archaic to historic
1. historic boat
1. historic rice mill
1. historic intertidal peat deposit
7. historic ruins
1. historic cemetery
7. historic buildings
7. Unidentified

Total: 82 sites

### Berkeley (38BK)

6. Indian sites
1. burial mound
1. burial
4. Multi-component sites:
   prehistoric to historic
12. historic sites
3. historic ruins
2. historic mounds

6. historic buildings
6. historic Indian sites
22. Unidentified

Total: 63 sites

### Calhoun (38CL)

1. possible mound
2. Archaic sites
1. woodland site
4. Multi-component sites:
   Archaic to Woodland
1. Multi-component site:
   prehistoric to historic
1. historic ruin

1. Revolutionary War earthwork
8. Unidentified

Total: 19 sites
